OCCUPATIONAL SAFETY MANAGEMENT SYSTEM POLICY

- As Datacore Information Systems, we aim to be the most preferred company by leading Software Hardware Integration, Data Management, Technical Support, Installation, and Maintenance Services. Delivering high-quality products quickly, taking into account customer expectations, is one of our primary principles.
- Ensuring the safe operation of services provided in accordance with national and international rules and practices,
- Providing safe and healthy working conditions to prevent work-related injuries and deterioration of health,
- Being a leading company by maintaining our occupational safety standards at the highest values and fulfilling legal requirements, providing services in compliance with international and national standards,
- Conducting risk assessment studies to identify hazards, ensuring the elimination of identified risks or reducing risks,
- Taking actions with the participation and joint decision of employees in all our activities,
- Reaching the goal of "Zero Accidents" by analyzing accidents, identifying root causes, and ensuring the development of procedures, ensuring the continuity of operational improvement,
- Preventing injuries and health deterioration by continuously improving occupational safety management and performance,
- Ensuring compliance with health and safety rules, preventing physical injuries and loss of life, providing necessary personnel training,
- Evaluating management performance and continuously updating the system to keep standards at the highest level,
- Taking necessary measures against all identified risks, evaluating the measures taken, and making necessary changes,
- Creating an emergency response plan and ensuring the continuous availability of the necessary human resources and other equipment, revising and conducting planned/unplanned drills, ensuring the active participation of all personnel in drills,
- Continuing efforts with an awareness of environmental and social responsibility to ensure environmental sustainability and respond to climate change,
- Paying attention to using environmentally sensitive and recyclable products within the scope of activities.
